

Goods Donation

Warehouse Perspective View

The donation warehouse serves as a hub for distributing aid to Sumba communities. It stores essential items such as "SolarBuddy" solar panel lamps, along with other donations, including clothing, footwear, stationery, blankets, and emergency relief supplies.

The donation storage building features a lightweight steel structure, galvalume roofing, and partially open walls exposed to rain, clad with galvalume sheets layered with woven bamboo panels for added durability and a touch of traditional aesthetics.

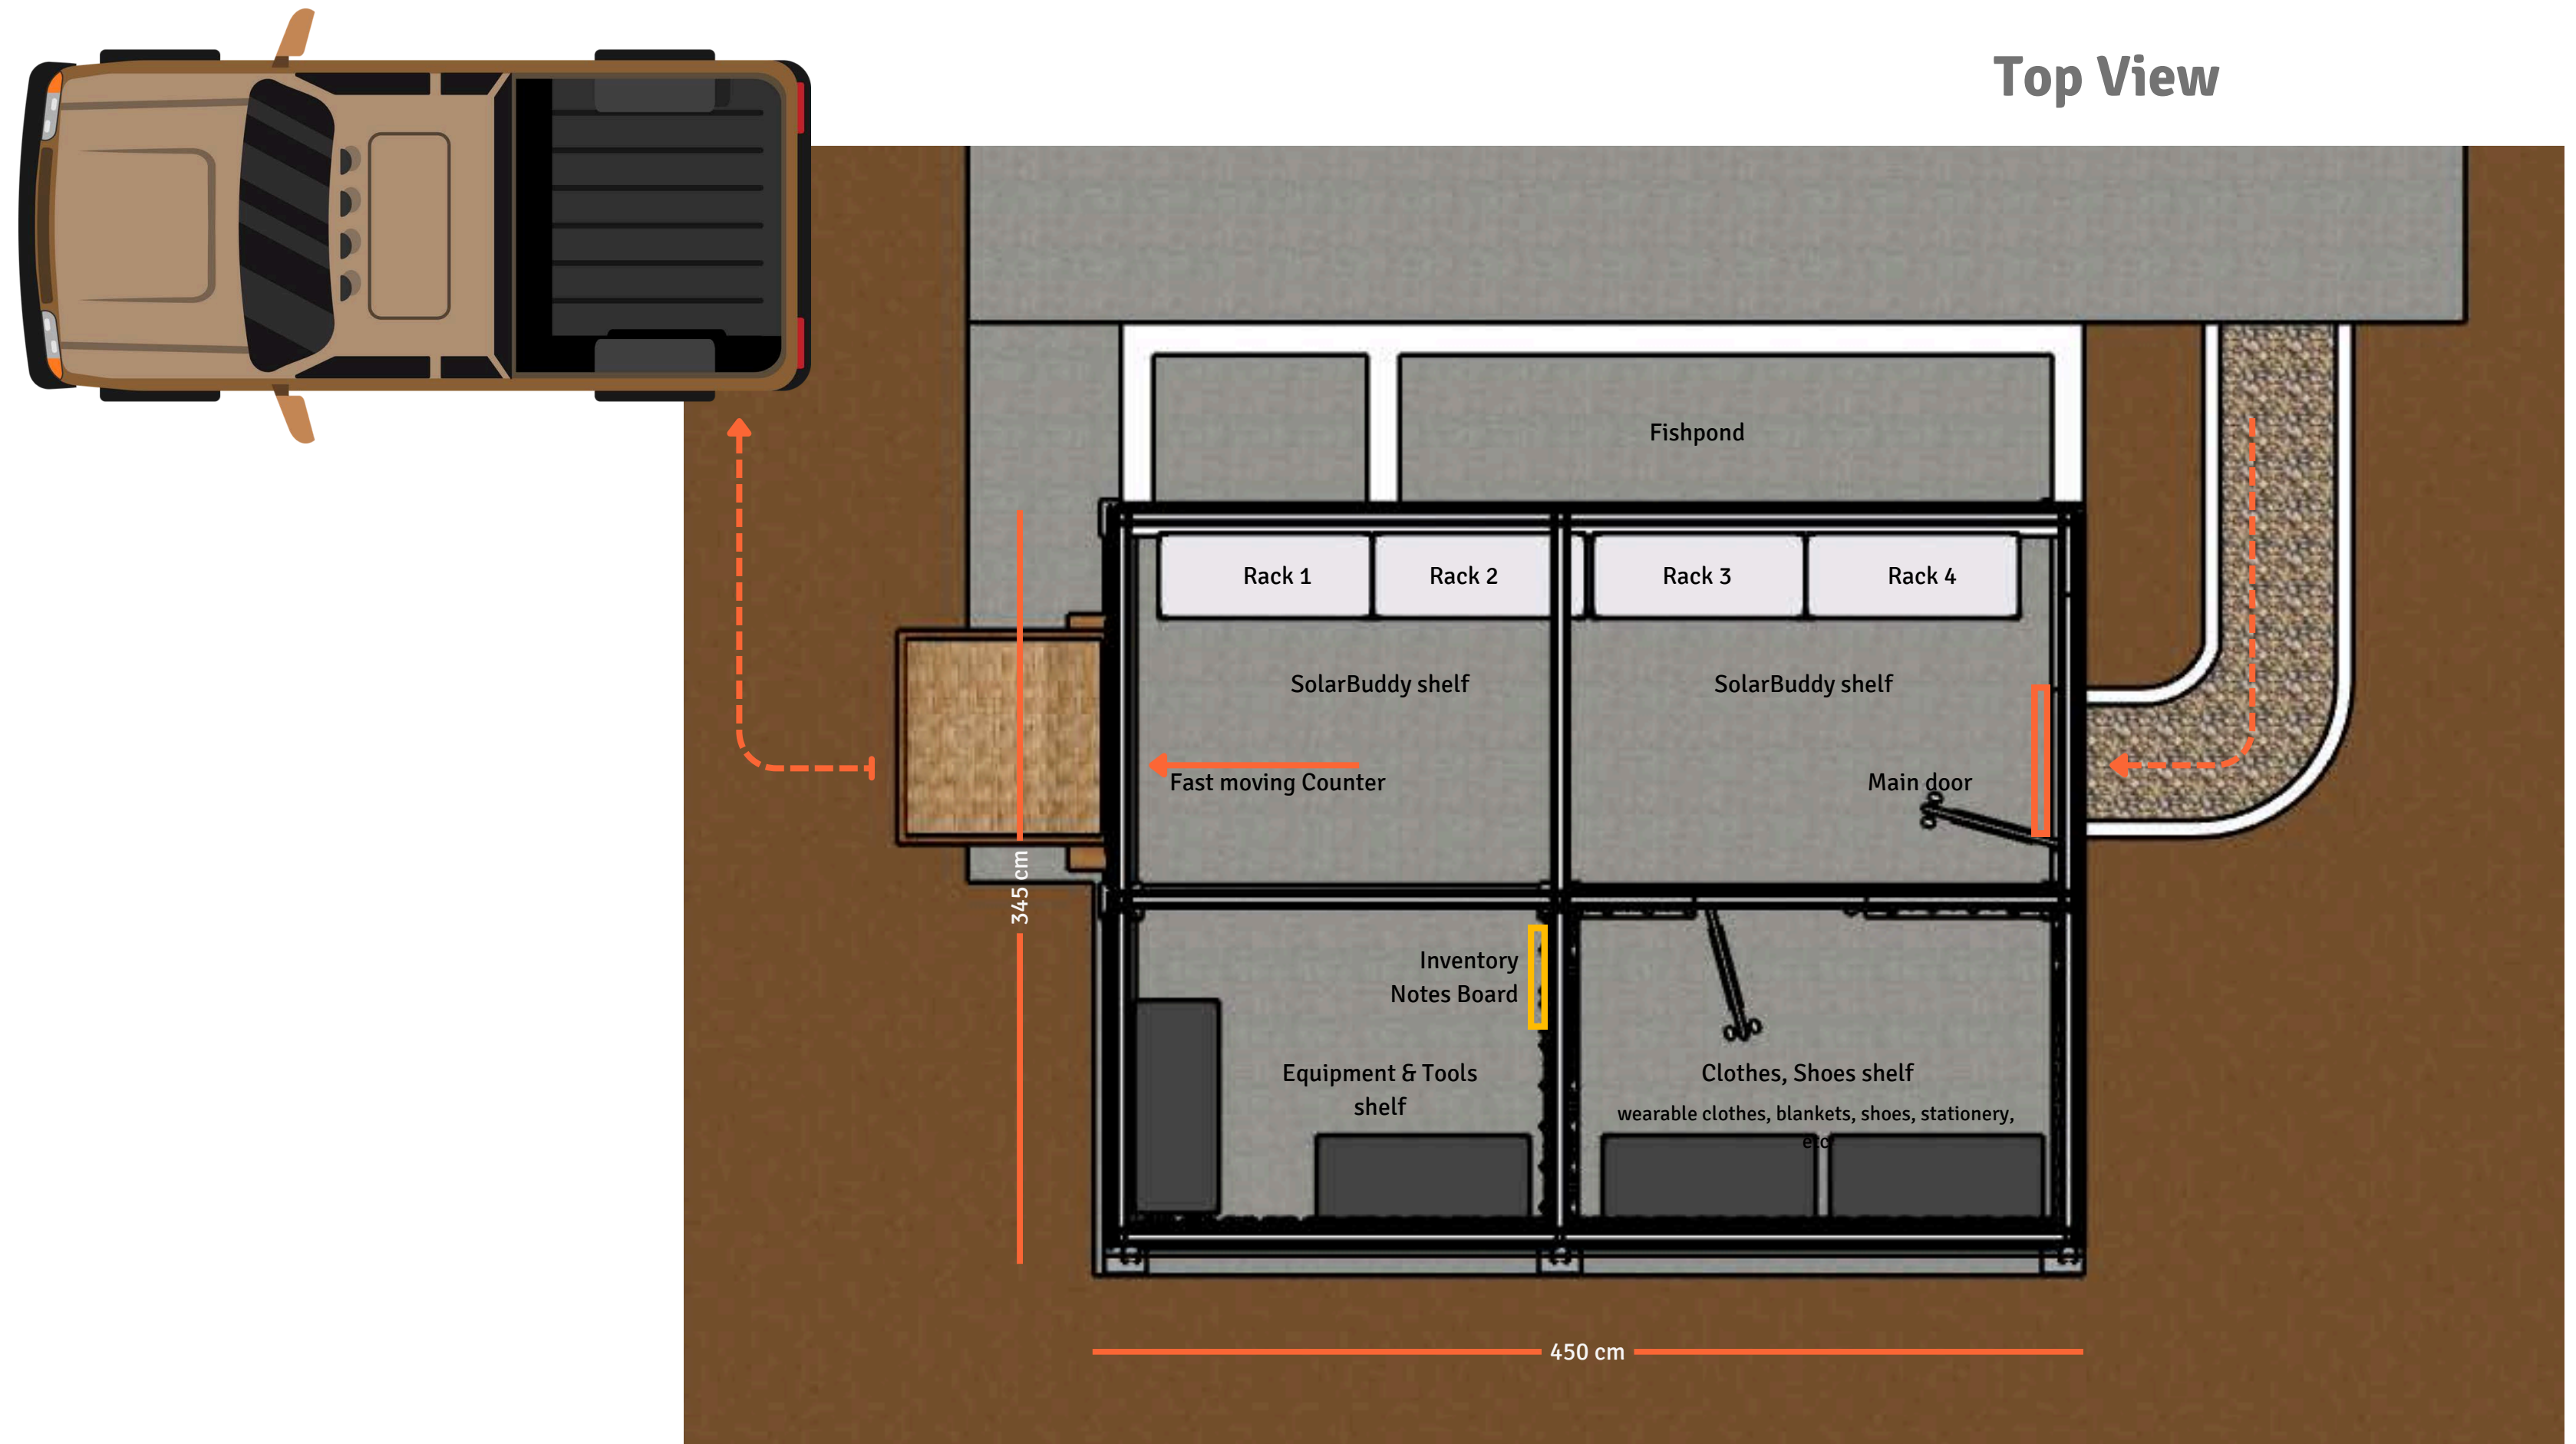

The warehouse is also equipped with racks for tools and equipment to support community assistance activities, including chainsaws, grass cutters, welding machines, and impact drills. These initiatives are made possible through the support of the Fair Future Foundation, Rotary International, SolarBuddy, and community fundraising efforts in collaboration with Yayasan Kawan Baik Indonesia.
