Malaria mosquito nets for families in East Sumba

Kawan Against Malaria / Primary Medical Care / Kawan Sehat Agents · East Sumba, Indonesia

COST PER LOT OF 10 NETS

CHF 104

Choose from one to ten lots.

CHF 104 funds a lot of ten large insecticide-treated mosquito nets for families in East Sumba. With malaria cases rising and our stock empty, we are raising funds to resume year-round distribution.

WHAT THIS PROJECT AIMS TO CHANGE

- Ten treated nets for uncovered sleeping areas.
- A demonstration and a printed care guide.
- Follow-up on nightly use and net condition.

01. WHY THIS PROJECT

Malaria is endemic in East Sumba. In November 2026, our field teams reported more cases in the areas they serve and fewer nets reaching families through public distribution. Our stock has run out. In the 2025 Umalulu study, 86 of 269 households surveyed reported partial or no net use.

02. DELIVERY AND FOLLOW-UP

PLANNED ACTION

Buy nets in lots of ten and distribute them free of charge. Group deliveries by village so teams can reach several households on one visit. Demonstrate how to hang and use each net, and give families a practical care sheet.

BUDGET BREAKDOWN

Expense	Qty	Unit cost	Total
Large treated nets (IDR 225,000 each)	10	10.40	104
Total · CHF			**CHF 104**

RESPONSIBLE TEAM

Fair Future Foundation and Kawan Baik Indonesia, through Kawan Against Malaria, Primary Medical Care and the Kawan Sehat agents.

INDICATIVE TIMETABLE

Group village visits as funding and supplies become available. Distribution continues throughout the year.

HOW WE WILL REPORT BACK

Record deliveries by village and date. On follow-up visits, check whether the net fits, is used at night and remains in good condition. Use these checks to plan repairs or replacement.

A mosquito net hung during an earlier visit in East Sumba.

SUPPORTING INFORMATION

Distribution, care and sources

CHF 104 funds ten nets (IDR 2,250,000). Donors can fund one to ten lots. We plan each visit with the local team, identify households with uncovered sleeping areas and allocate nets according to need across the village.

A large net can cover five or six people sharing a sleeping area that it fits. Separate sleeping areas may need separate nets. The Reliefnet package on page 1 illustrates an earlier distribution.

We show families how to hang and use their nets every night and how to wash them according to the instructions for the model supplied. At follow-up we check whether nets need repair or replacement.
